. 2 -

Legend

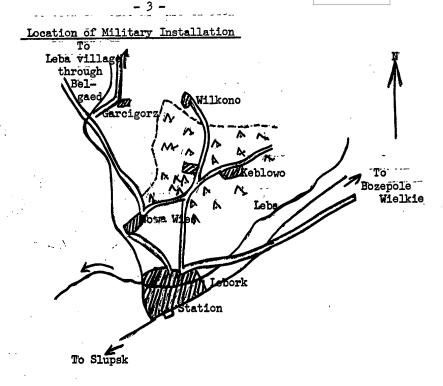

- 1. Small wooden hut for the guard, occupied by about six Polish soldiers. A telephone line runs from the guardroom in the direction of Lebork. South of the guardroom there is a gate about 3 meters wide. A sentry is always on guard at the gate armed with a machine carbine. The guardroom checks the passes of everyone arriving before admitting them. North of the guardroom, in the direction from east to west, is a newly built barbed wire fence, 2 meters high. Immediately north of the guardroom there is a narrow entrance in the new fence for pedestrians; approximately in the center of the fence, there is a gate about 3 meters wide. All entrances are closed with iron sheet doors.
- 2,3,4. Underground stores, each about 60 meters long and 10-12 meters wide. Depth is not known. On the eastern and western sides of the buildings there are wide sloping gates. The dimensions of these stores are estimated in accordance with the length and the width of the mounds of the earth covering them. There are trees and shrubs on the earth mounds.
- 5,6,7. Brick stores, each about 50 meters long, rising about 1.5 meters above the ground level. Depth unknown. It was observed several times that cases measuring about 2 x 1 x 1 meters were unloaded at these buildings from trucks which had always driven into the installation singly. It appeared that the cases were heavy, as each was unloaded by five or six soldiers. On one occasion a gun barrel about 4 meters long was unloaded.
 - 8,9. Wooden huts, each about 20 meters long, occupied by a total of 40 to 50 Polish soldiers.
- 10;11. Brick sheds, each about 40 meters long, 15 meters wide and rising 4 to 5 meters above the ground level. From shed 10 a concrete road about 3 meters wide led in a northerly direction and ended between store buildings 3 and 4.
